Comments

Notification #499183 - inspection request. Former land farm, LF-0295. Upon arrival to location I observed no visible pollution across the former land farming cells (12 cells total). There are 5 plugged well pads across this former land farm. I observed no pollution on any of the plugged well locations. Some of the plugged well pads are now being used to store hay bales. One of the plugged locations has a rig on it actively plugging the last of the wells on the former land farm. A residential development has been built on former cell No. 12, 11, 10, 9, and 8.

Inspector Information and Certification

I certify that the data included in this inspection is true and complete.
